General

Thank you for choosing an Etac product.

To avoid accidents and injury when moving and handling the products, please read this manual carefully.

The person described as “the user” in this “Instruction for Use” is the person who is lying or sitting on the product. The carers are the people who manoeuvre the product.

This symbol appears alongside the text in the manual. It draws the reader’s attention to points at which there may be a risk to the health and safety of the user or carer.

These products comply with the standards applicable for Class 1 products in the Medical Device Regulation (EU) 2017/745 on medical devices.

At Etac we strive to continually improve our products and therefore we reserve the right to make changes to products without prior warning. All measurements given on illustrations and similar material are for guidance only and Etac cannot be held liable for errors and defects.

The information given in this manual, including recommendations, combinations and sizing, does not apply to special orders and modifications. If the customer makes adjustments, repairs or uses combinations not predetermined by Etac, the Etac CE certification and Etac warranty will not be valid. If in doubt, please contact Etac.

Warranty: Two-year warranty on material and manufacturing defects, provided that the product is used correctly.

Expected lifetime: The device has an expected service life of 1 to 2 years under normal use. The service life of the device varies depending on usage frequency, loads and how often and how it is washed.

For further information on the Etac Patient handling, see www.etac.com.

In case of an adverse event occurred in relation to the device, incidents should be reported to your local dealer and the national competent authority in a timely manner. The local dealer will forward information to manufacturer.

Article number

Medical device

Intended use

SatinSheet 4Direction is a DrawSheet for use with BaseSheet (SatinSheet BaseSheet 2Direction). The SatinSheet system is used for repositioning and turn a user in bed.

Intended environment

Acute care, Long-term care, Home care

Practical handling

Positioning

Position SatinSheet BaseSheet with the low-friction material (satin) uppermost in the middle of the bed (Illustrations). If necessary, a draw sheet can be laid on SatinSheet. All SatinSheet models have a “this side up” label indicating which side of the sheet should face upwards in the bed. An information label, describing the correct use of the product, is sewn into all SatinSheet models/products.

Place SatinSheet 4Direction on BaseSheet (satin against satin).

Before locking the glide system under the mattress, any unevenness/wrinkles should be smoothed to avoid decubitus. The carers pull simultaneously and diagonally from both sides.

Use

Turning with SatinSheet 4Direction (Illustrations 1-3)

Always use SatinSheet 4Direction with one of the SatinSheet models.

The back of SatinSheet 4Direction is made of a low-friction material. It is ideal for use with bariatric users. The procedure for turning with SatinSheet 4Direction is identical with the procedure for turning with SatinSheet and a draw sheet. To turn a user in bed: Grasp the draw sheet at hips and shoulders. To achieve a better ergonomic grip, the carer should grasp as much fabric as possible.

Always work with flat wrists and weight transference. Turning with SatinSheet can also be done by two carers. The carers work together. One carer helps pull on SatinSheet while the other carer pulls down on the mattress at the level of the user's hips and shoulders, pushing gently.

If using SatinSheet 4Direction with handles you can turn the user with a hoist. Place the webbing handles on the sling bar hooks and slowly turn the user (Illustrations 4+5). Place a positioning pillow or wedge to support the user's back and slowly lower the hoist again. Remove the handles from the sling bar hooks. Raise the guard rails if required.

Turn the user.
To lock the glide system after turning: Fold the excess material from DrawSheet under the mattress on both sides of the bed.

Moving the user higher up in the bed (Illustration 6)

To move the user higher up in the bed, grasp SatinSheet 4Direction at both sides of the user's shoulders. Standing with one foot forward, the carer pulls, using weight transference.

Sitting up in bed with SatinSheet 4Direction (Illustrations 7+8)

To prevent the user sliding down in the bed when sitting up, part

of SatinSheet 4Direction can be folded in under the user. Then fold SatinSheet in under the mattress, although only at the hips. The bed headboard can then be raised. SatinSheet functions here as a brake.

Prone positioning

Remove the head-end of the bed. If the user is connected to a ventilator or other life saving machines, turn the user towards the equipment. Place the hand of the user under the hip. If needed add 2-3 pillows or positioning cushions used on top of the users body. Place a SatinSheet4Direction on the pillows with the satin facing upwards, starting at the head end - fold the 4Direction away from the users head. Tug the SatinSheet4Direction top around the user like a cocoon. Fold the lower 4Direction away from the users head (satin against satin)
One carer secures the head of the user and one carer on each side to support the user.
Move the user to the opposite side to where the user is turned. Place the webbing handles from the SatinSheet4Direction which the user lay on in the sling bar hooks and slowly turn the user to almost 90° (Illustrations 9) Push and pull in the SatinSheet4direction, to secure the rotation is a bit of center. When user is on the side one carer tug the SatinSheet4Direction on the bed under the user to be able to remove it when the user is turned to prone. Same carer support the user by having the hands on the shoulder. Continue to turn the user until the user is in a proned position. Lower the hoist again. Remove the handles from the sling bar hooks and remove the SatinSheet4Direction. Unfold the 4Direction under the users head. If necessary move the user to the center of the bed. Secure that the user is correct positioned. (illustration 10) Raise the bed rails if required. Turn to supine positioning the same way.

Notice

Special features

Always check the product before use and after washing.

Never use a defective product. If the product shows signs of wear-and-tear, it must be scrapped.

Read these instructions carefully.

It is important that carers receive instruction in manual handling. Etac offers advice and training for carers. For further information, contact Etac.

Always use the correct manual handling techniques

Encourage the user to assist where possible.

To ensure that the user feels safe and that every manual handling is smooth, always plan the manual handling in advance.

There is a risk that the user may slide off. Never leave the user alone on the edge of the bed.

Never leave the product on the floor.

Always conduct a risk assessment, and ensure that the assistive product can be used for the individual user and, in combination with other devices, that it is safe for the user and carers.

It is recommended that the guard rail is in place when the user is left on the glide system, unless a risk assessment has found that the user can be safely left on the glide system without the need of guard rails.

Always lock the glide system when you have completed the transfer.

If in any doubt - please contact Etac.

Material and cleaning

Material:

SatinSheet 4Direction:

Polycotton: 55% cotton/45% polyester

Satin: Polyester.

SatinSheet In2Sheet 4Direction:

Microfibre top side: Polyester

Middle layer: 65% polyester/35% viscose

Barrier: Polyurethane

Glide area: Polyester

Handles: Nylon

Wings: 55% cotton/45% polyester.

Absorption: 2200 ml/m².

The product should be checked regularly, preferably each time it is used, and especially after washing.

Check that there is no damage to seams or fabric.

**Never try to repair a product yourself.
Never use a defective product.**

Recommended to wash the product before use.

Washing instructions:

Ironing improves the glide effect.

Do not use fabric softener.

This product can be cleaned with a solvent-free cleaning agent with a pH level between 5 and 9, or a 70% disinfection solution.

Service information

Inspection

First inspection:

- Is the packaging intact?
- Read the label on the packaging and check the article no. and product description
- Check that Short Instruction is enclosed – updated User Manual/Instruction for use can be downloaded from www.etac.com or contact your Etac Customer Service or the local dealer.
- Check the label on the product - does it include article no., product description, lot/batch no., cleaning instructions and supplier name?

Periodic Inspection:

- Make sure that your Manual transfer system always is in a perfect condition.
- After wash – always check materials, stitching, handles, buckles.
- If the product shows signs of wear and tear, it must be removed from service immediately.

Visual inspection/Check the product:

Ensure that the materials, seams, stitching, handles, buckles are intact/faultless.

Stability test:

Try to bend the product verify that it feels firm, stable and solid.

Mechanical load or stress/Test handles:

Draw hard in the handles in opposite directions and control the material, seams and stitching.

Test buckles:

Lock the buckle and draw in opposite directions, control the buckle and the stitching.

Test low/high friction:

Place the product on a firm surface or a bed, place your hands on the material and test the friction by pushing your hands down into the product.

Low friction – slides effortlessly
High friction – no sliding/moving

Check:

Manual transfer aids with handles, straps and buckles:

Manual transfer aids with for sitting and lying transfer and with high or low friction:

Production year, month and day

The product can be scrapped in accordance with national regulations

Read the user manual
